ilt. re Appl. Nr. 59/543, Nr. Confirmation No. 8337

## REMARKS

application. The Office Action of January 18, 2002, has been carefully studied. These plaims define novel and unobvious subject matter under Sections 102 and 103 of 35 U.S.C., and therefore should be allowed. Applicants respectfully request favorable reconsideration, entry of the present amendment, and formal allowance of the claims.

## Rejections under 35 U.S.C. 112

Claims 11-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

This rejection is respectfully traversed. It is not understood why claim II is said to be indefinite. Claim II has been amended to recite that, if the test for a, b, or c is positive, concluding that the donor or potential donor is a carrier of a disease or condition related to at least one of HTLV-I or HTLV-II.

With respect to the limitation "...a sample from the donors...", claim 11 has been amended to recite
"testing a sample from a donor or a potential donor..."

The sample is tested for the presence of a DNA which encodes either the HTLN-1 tax protein or the HTLN-11 tax

in re Appl. No. 7 9/843,781 Confirmation No. 8319

protein. The sample is tested for at least one of the intentions comprising HTLV-1 or HTLV-11, although the donor or potential donor could be intected with either one or both.

Claim 13 has been amended to correct the selfevident typographical error.

## Art Rejections

Claims 11-13 are rejected under 35 U.S.C.

102(b) as being anticipated by Zucker-Franklin et al.

(The Lancet 349:999, 1997). The Examiner alleges that this article teaches screening of 100 healthy potential blood donors for the presence of HTLY-I tax DNA by PCR, and the donors were tested for the presence of antibodies to the tax protein. No other tests for the detection of HTLY-I or HTLY-II viruses were performed.

This rejection is respectfully traversed. The present invention is directed to a method for screening healthy blood donors or potential blood donors to determine if these persons are carriers of diseases or conditions related to at least one of HTLV-I or HTLV-II. This screening is effected by testing a sample from the donor for the presence of a DNA which encodes the HTLV-I tax protein or the HTLV-II tax protein. The presence of the HTLV-I tax protein or the HTLV-II tax protein indicates the presence of:

·In re Appl. No. 09/843,7%2 of nfirmation No. 4307

- a. at least one of the HTLV-I tax protein or the HTLV-II tax protein;
- b. DNA which enotides at least one of HTLV-I tax protein or HTLV-II tax protein; and
- $\ensuremath{\text{gr.}}$  antibodies specific to at least one of HTLV-I or HTLV-II tax protein.

If the test is positive, it is concluded that the donor or potential donor is a carrier of a disease or condition related to at least one of HTLV-I or HTLV-II infection.

Zucker-Franklin et al, in *The Lancet* article, note in paragraph 2 of the article that the test was performed on potential donors who are negative for antibodies to HTLV-I/II by standard serological tests used in U.S. blood-transfusion centers. The implication here is that the persons tested had already tested negative on standard serological tests. This is contrary to the present invention, in which the persons tested had not been tested for antibodies to at least one of HTLV-I or HTLV-II, or had not been subjected to any screening test specifically to test for infection by HTLV-I or

In view of the above, it is respectfully submitted that the claims are now in condition for

·In ra Appl. No. 109/843,742 Confirmation No. 4387 allowance, and favorable and but thereon is earnestly salisticai.

Respectfully submitted,

## "Version with markings to show changes"

11. 'Amended, A method for screening healthy blood donors or potential blood donors for darriers of diseases or conditions related to at least one of HTLV-I and HTLV-II infections comprising:

potential - - - - for the presence of a DNA which encodes the HTLV-I tax protein or the HTLW-II tax protein;

wherein a positive test for the presence of a DNA which encodes the HTLV-I tax protein or the HTLV-II tax protein indicates the presence of:

- a. at least one of HTLV-I or ETLV-II tax
  protein;
- b. DNA which encodes at least one of HTLV-I or HTLV-II tam protein; and
- c. antibodies specific to at least one of HTLV-I or HTLV-II tax protein;
- and, if the test for at least one of (a),

  "b,, or 'c is positive, .... that the

  donor or potential donor is a carrier of a disease or

  condition related to at least one of HTLV-I or HTLV-II

  infection.

In te Appl. No. 54/843,740 Unitimation No. 8:07

• . . . •

IN. TAmended. The method aggording to claim
If wherein said testing emprises subjecting each sample
from the donors or potential donors to a test for the
for DNA which encodes at least one of
HTLV-I or HTLV-II tax protein, in the absence of any
screening test specifically provided to test for
infection with at least one of HTLV-I or HTLV-II.
